Le Ministre de l'Economie, de la Planification et de  
l'Aménagement du Territoire.

Alamine Ousmane Mey

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. One of the main reasons is the increase in the world population, which has grown from 5 billion in 1987 to 6 billion in 2000 (FAO 2001).

Another reason is the increase in the number of people who are living in poverty, which has led to a decrease in the amount of food that they can afford to buy (FAO 2001).

There are also a number of other factors that have contributed to the increase in undernourishment, such as the increase in the number of people who are living in rural areas, which has led to a decrease in the amount of food that is available to them (FAO 2001).

There are a number of ways in which we can reduce the number of people who are undernourished. One of the most important ways is to increase the amount of food that is available to them (FAO 2001).

Another way is to increase the amount of food that they can afford to buy. This can be done by increasing the minimum wage, or by providing food subsidies (FAO 2001).

There are also a number of other ways in which we can reduce the number of people who are undernourished, such as by increasing the amount of food that is available to them (FAO 2001).
