## **A- INTRODUCTION.**

This specification aims to define the mode of execution of work to be done following the norms and approved standards, according to the documents of the Contract.

The choice of technological options for achieving the proposed work has the sole concern to ensure a better functionality of facilities in compliance with safety rules for the protection of property and persons. It has been established as a guide to clarify and supplement the guidance of the estimate and drawings notwithstanding the terms of the Contract.

## **B-MODE OF EXECUTION OF WORK**

### **General:**

For all construction arteries medium voltage, single-phase or three-phase sub-stations, MV/LV, LV single-phase and three-phase lines, generator house, thermal electricity production, and security measures and environmental protection to be observed, they must conform to the requirements, laws, decrees, orders, standards, norms and Publications in force in Cameroon and for management of the electricity sector. In default the texts will be applied in this order:

- The recommendations of the International Electro-technical Committee (IEC Publication);
- The European standards CEN-CENELEC (EN);
- The French AFNOR standards;
- The decision of 2<sup>th</sup> April 1991 laying down the Technical Conditions to be satisfied by the distribution of electricity, published in the Official Gazette of the French Republic on May 4, 1991;

- Any other norms recognized in the system (ISO).

All these rules may be modified under the responsibility of the Administration in charge of electricity to reflect local conditions, knowing that the works will be built to suit the conditions defined below:

- Average temperature: 35° C
- Humidity correspondent: 98 %
- Extreme temperature (indoor):

- Max + 50° C;
- Exceptional speed winds 180 km / h;
- Normal speed winds 5 to 35 km/h

Wooden poles shall conform to the standard UPDEA.

### **\* Specific case of mini and micro diesel power plants:**

They are part of the internal electrical installations for power up to 100 KW (125 KVA). It will often consist of compact units with low voltage three-phase output or separate elements with a low voltage general control board, transformer, three-phase MV outlet.

### **Documents:**

The Works will be performed according to the following documents;

- The technical offer of the bidder (detailed technical definition of the consistency of the work and execution plans,) approved and completed by the project owner
  - The attached cost estimates;
  - The general administrative terms and conditions applicable to works Contracted on behalf of State;
  - The various international standards recognized in the system (ISO) and may apply to the environment and economic climate of Cameroon;
  - The local power authority, safety and environmental protection regulations applicable in Cameroon;
- The Contract documents are complementary and must be accepted as a whole. They explain and complement each other in order to define the works to be performed.

All that would be missed by some, but noticed by others and that would be required to complete the work in accordance with the clear intent of the said Contract documents to be executed by the Contractor without additional charges.

### √ **DIMENSIONNEMENT DES OUVRAGES.**

#### **Transformateurs**

La puissance demandée est de  $P = 54,1$  KVA. Compte tenu des pertes dans les réseaux et le degré de charge d'un transformateur normalisé à 80% cette puissance appelée est de 64,8 KVA soit un transformateur monophasé de 25 KVA.

Cependant, le présent projet prévoit de satisfaire dans un premier temps, uniquement la demande en énergie domestique d'une partie de la population du secteur et il aura un transformateur monophasé de 25KVA.

La desserte en BT-Mono du reste de la Communauté se fera à la suite du présent projet par extension à la demande des populations bénéficiaires.

#### **Coupe-circuits**

Les normes prévoient pour le réseau monophasé de plus de 500mètres des coupe-circuits :  
Un au point de dérivation et un autre au niveau du transformateur.

### **PROTECTION DU RESEAU ET NORMALISATION.**

Ces deux préoccupations doivent être prises en compte aux raccordements au réseau ENEO, car cette société insiste sur l'aspect normalisation des équipements et des installations électriques avant tout branchement sur son réseau. Cette normalisation vise surtout à protéger et à sécuriser les installations, ainsi qu'à assurer la fourniture d'une énergie de qualité aux consommateurs.

Les recommandations faites dans le cadre de la présente étude sont conformes aux normes en vigueur. Il faudra simplement veiller à leur respect et à l'acquisition du matériel électrique répondant à ces normes.

Ces préoccupations justifient les recommandations majeures ci-après :

- Pose d'un coupe-circuit à expulsion au point de raccordement et à chaque transformateur pour isoler des tronçons de réseau en cas de problèmes ;
- Pose d'un poteau jumelé à chaque arrêt de ligne et chaque dérivation ;
- Utilisation des poteaux normalisés de 11mètres pour les lignes MT et mixtes ; 9mètres pour les tronçons BT simples ;
- Pose d'équipement de mise à la terre en arrêt des lignes, sur chaque poteau-transformateur et sur chaque poteau entourant un transformateur ;
- Câble almélec 1×34 mm<sup>2</sup> pour la ligne moyenne tension et câble torsadé 4× 25 mm<sup>2</sup> en aluminium pour le transport BT.
- Les poteaux sont implantés selon le schéma normalisé.

#### **Ligne moyenne tension et ligne mixte.**

\* Poteau simple (S) de 11mètres avec isolateur suspendu et équipement d'ancrage, pour alignement droit et angle jusqu'à 10° ;

\* Poteau jumelé (J) de 11mètres avec isolateur suspendu et équipement d'ancrage, pour angle entre 60° à 90° ;

### **Ligne basse tension**

- \* Poteau simple (S) de 9mètres avec console de suspension et pince d'alignement, pour alignement droit et angle jusqu'à 10° ;
- \* Poteau jumelé (J) de 9mètres avec console de suspension et pince d'alignement, pour angle 10° et 45° et pour dérivations ( $\geq 90^\circ$ ).
