b. If the total obtained by addition or subtraction of the totals is not exact, the sub totals shall be considered authentic and the total corrected.

c. Where there is a difference between the price indicated in letters and in figures, the amount in letters shall be considered authentic, unless the amount is linked to an arithmetical error confirmed by the sub-detail of the said price, in which case the amount in figures shall prevail subject to paragraphs (a) and (b) above.

30.2 The amount featuring in the bid shall be corrected by the Evaluation sub-committee, in accordance with the error correction procedure above and with confirmation by the bidder, the said amount shall be deemed to commit him.

THE SPECIAL TECHNICAL CONDITIONS

1. Project Background and Rationale

The rural localities of Menji and Bakebe, situated in the Lebialem Division of the South West Region of Cameroon, have long experienced persistent energy challenges due to dilapidated and insufficient electrical infrastructure. In response to national priorities targeting rural electrification, economic revival, and social development in underserved regions, the present project aims to rehabilitate and extend the overhead Medium Voltage (MV) and Low Voltage (LV) electricity networks within this corridor.

The intervention is designed to enhance the reliability, safety, and efficiency of electricity supply to households, small businesses, schools, health centres, and administrative offices in the area. It aligns with the Government of Cameroon's broader development strategies under the energy sector development plan, and is expected to improve quality of life and stimulate local economic activity.

2. Scope of Works

The project encompasses five main components, each addressing a key segment of the electricity distribution system:

A.1 - Medium Voltage (MV) Line Works

This component involves the full rehabilitation of the existing MV overhead distribution line. Key activities include:

- Vegetation clearance through pruning and tree felling over 7,500 linear metres;
- Topographical survey and staking;
- Earthworks for pole foundations, with excavation in lateritic soils;
- Supply and erection of 160 units of 11m reinforced concrete poles;
- Installation of line accessories such as anchoring chains, U-irons, rigid insulators (30 kVA), lightning arresters, and head brackets;
- Stringing of 4,000 ml of Almelec conductor cable (1 x 54 mm²);
- Execution of live-line works under power outage conditions;
- Mounting of identification and safety signage.

A.2 - Single-Phase Transformer Stations

- Concrete pole supports (12m);
- Fully equipped transformer units;
- Lightning protection (30KV);
- Expulsion fuse switches;
- MALT earthing system (Type B);
- Appropriate safety signage and numbering.

A.3 - Three-Phase Transformer Station

One major three-phase transformer station of 50 kVA will be established to support higher power loads. This includes:

- 12m concrete poles (j type);
- A fully operational transformer with three-phase equipment;
- Lightning arresters (50KV);
- Expulsion fuse cut-outs;
- Earthing and safety identification.

A.4 - Low Voltage (LV) Network

This section addresses the final distribution of electricity to end users through:

- Installation of 100 9m wooden poles (s type) and 75 9m wooden poles (j type);
- LV armouring (alignment and anchoring);
- Deployment of 4,000 ml of 4x25mm² twisted aluminium cable;
- Construction of service derivations and PL-type connections;
- Grounding systems and mounting of number plates for identification.

A.5 - Miscellaneous Services

To ensure the project is realised in line with good engineering and operational standards, support services include:

- Transportation of concrete poles and electrical materials;
- Team mobilisation and site logistics;
- Site installation and decommissioning;
- Preparation of as-built drawings upon project completion.

3. Expected Outcomes

Upon successful execution, the project will:

- Restore and stabilise medium and low voltage electricity supply in Menji and Bakebe;
- Enhance the capacity for local economic activities, particularly in agro-processing, small industries, and commerce;
- Improve public service delivery, especially in health, education, and local governance;
- Reduce the frequency of electrical faults and outages;
- Increase safety through modernised protection and signage systems.

4. Technical and Financial Overview

Total Project Cost (TTC): FCFA 462,000,000 and will be executed within 4 months.

All works shall be executed using materials and equipment approved by the supervising authority and compliant with Cameroonian and international standards for electricity distribution. The contractor shall ensure that ENEO is involved in the execution of the works. The project will on completion be handed over to ENEO for management and exploitation.

FRAMEWORK OF SUB-DETAIL OF PRICES

FRAMEWORK OF SUB-DETAIL OF PRICES

Note relating to the presentation of the sub-detail of prices and taxes

1, A sub-detail presents all the stages involved in the establishment of a sales price. It is also an important element for the evaluation of the quality of the price proposed by a bidder.

It is not necessary to impose a model of presentation on all bidders, taking into account the great diversity of software for the determination of sub-details of prices. On the other hand, they must include the following elements;

- a. Detail of the sales coefficient according to the model presented after this note;
- b- Cost in dry price of the materials provided for the site;
- c. Cost in dry price of the supplies necessary for the site;
- d. Cost of local and expatriate labour;
- e. For each price on the Schedule of prices, a form resulting from points a, b, c and d above indicating the outputs leading to the unit prices;
- f. The precise sub-detail of lump sums for the installation of the site camp, the carting in and out of equipment, laboratory and its equipment, development of a quarry (where need be), etc;
- g. The precise sub-detail of lump sums for the building, maintenance of premises and supply of means put at the disposal of the Contracting Authority;
- h. The sub-detail of dues and taxes.

2- Presentation framework of the sales coefficient, also called the coefficient of over-heads.

3. The Contracting Authority may propose a framework of sub-detail of unit prices including the elements mentioned in point 1 above.
