NETWORK PROTECTION AND STANDARDIZATION.

These two preoccupations must be taken into account when connecting to the ENEO network, as this company insists on the standardization aspect of electrical equipment and installations before

any connection to its network. this standardization aims above all to protect and secure installations, as well as to ensure the supply of quality energy to consumers.

The recommendations made within the framework of this study comply with the current standards. it will simply be necessary to ensure their respect and the acquisition of electrical equipment meeting these standards.

These preoccupations justify the following major recommendations:

- Installation of an expulsion circuit breaker at the connection point and at each transformer to isolate network sections in the event of problems;
- Installation of a twin post at each line stop and each derivation;
- Use of standard posts of 11 meters for MV and mixed lines; 9 meters for single LV sections;
- Installation of earthing equipment at line stops, on each post-transformer and on each post surrounding a transformer;
- Almelec cable $1 \times 34.4 \text{ mm}^2$ for the medium voltage line and twisted cable $4 \times 25 \text{ mm}^2$ in aluminum for LV transport.
- The poles are installed according to the standardized scheme.

Medium voltage line and mixed line.

*single 11m pole (S) with suspended insulator and anchoring equipment, for right alignment and angle up to 10° ;

* twin 11m pole (J) with suspended insulator and anchoring equipment, for angle between 60° to 90° ;

Low voltage line

* 9m single pole (S) with suspension console and alignment clamp, for straight and angle alignment up to 10° ;

* 9m twin pole (J) with suspension console and anchor clamp, for 10° and 45° angle and for derivations ($\geq 90^\circ$).
