- Exclusive of VAT- AIR or TSR] paid directly into the account of the administration's contracting partner;
- VAT at the rate in force;
- [AIR or TSR] paid to the Treasury for AIR or TSR owed by the contractor;

38.3 Final detailed account

After completion of the works and within a maximum of thirty days after the date of provisional acceptance, the contractor shall prepare, on the basis of joint statements the draft final detailed account of the works actually carried out, which shall summarise the total amount of the sums to which he may be entitled as a result of the execution of the contract in full.

This draft final detailed account, once rectified by the Project Manager or the Engineer and accepted by the Contract Manager becomes final. It is used to prepare the down payment for the balance of the contract, established under the same conditions as those defined for preparing the monthly detailed accounts.

38.3.1 *[indicate the period available to the Contract Manager to notify to Project Manager the corrected*

and accepted draft (maximum 1 month)].

38.3.2 The administration's contracting partner must, within a maximum period of one month following the date of this notification, return the final detailed account signed without or with reservations, or make known the reasons for refusing to sign.

If the contractor signs with reservations or does not sign the final detailed account, the reasons for this refusal or reservation must be expressed by the contractor in a summary document of all the claims for which he is claiming payment, accompanied by the necessary supporting documents, and sent to the Project Manager within the same time limit as above, under pain of foreclosure.

The dispute is then settled in accordance with the provisions of the Public Contracts Code in force and the applicable GAC.

38.4 General and Final detailed account

38.4.1 Within a deadline of one (01) month after the final acceptance, the Contract Engineer shall draw up the detailed final payment.

At the end of the guarantee period, which gives rise to the final acceptance of the works, the Contract Manager shall prepare the general and final detailed account of the contract and has it signed jointly by the contractor and the Project Owner or Delegated Project Owner. This detailed account includes:

- the final detailed account,
- the balance,
- the summary of monthly down payments.

The signing of the general and final detailed account without reservation by the contractor binds the parties completely and puts an end to the contract, and releases the Project Owner and the Delegated Project Owner from any obligations, except as regards interests on overdue payments.

35.8.2 The contractor then has one (01) month from the date of this notification to return this general detailed account, with or without reservations, to make known the reasons for his refusal to sign the general detailed account.

The transmission of the general and final detailed account to the paying body for payment is subject to MINMAP prior endorsement. For this purpose, a copy of the corresponding job cost sheet and all the provisional detailed accounts must be sent to him beforehand or handed to his representative on the site, as appropriate.

The deadlines and conditions for signing and handling disagreements are the same as for the final detailed account.

Article 39- Interests on overdue payments

The possible interests on overdue payments shall be paid by statement of sums due and calculated in accordance with the provisions of Article 166 and 167 of Decree No.2018/366 of 20 June 2018 to institute the Public Contracts Code and using the formula below:

$L = M \times (n/360) \times (1)$ where:

M = Amount, inclusive of taxes, owed to the holder;

N = Number of calendar days of delay;

i = BEAC corporate lending rates increased by one (1) point or discount rate applied by the Bank issuing the currency involved, increased by at most one (1) point, as the case may be.

√ DESIGN OF INFRASTRUCTURES/EQUIPMENT

Transformers

The required power is $P = 54.1\text{KVA}$. Given that the line losses and the load capacity of transformers is fixed at a nominal value of 80%, the effective power required is 64.8 KVA which is equivalent to a single-phase transformer of 25KVA.

The present project foresees the supply of the domestic energy needs of a sector of the concerned population and will have a 25KVA single phase transformer.

The supply of the rest of the community with single phase low voltage will be done subsequently after the execution of this project at the request of the beneficiary population.

Fuse cutouts

The standards foresee Fuse cutouts for every 500m for single phase networks: One at the deviation point and the other at the level of the transformer

NETWORK PROTECTION AND STANDARDISATION.

Both specifications need to be taken into consideration during the connection of the constructed network to the ENEO grid given that the latter company emphasizes on the effective standardisation of equipment and electrical installations prior to connection to the network under their management. The standardisation consists of protecting and securing the installations as well as ensuring quality energy supply to the consumers.

- The recommendations suggested in this study are in conformity with the standards in force. It will therefore be important to simply respect them and acquire electrical material which is in conformity with these standards.
- The major related recommendations based on the specifications mentioned are as follows:
 - Installation of a fuse cutout at the connection point and at each transformer to facilitate network branch isolation in case of problems;
 - Installation of twin poles at each end point and each deviation point;
 - Use of standard 11m poles for Medium Voltage and mix lines; 9m poles for simple Low Voltage lines or segments;
 - Installation of earthings at end points, each pole carrying a transformer and each pole surrounding a transformer;
 - $1 \times 34.4 \text{ mm}^2$ Almelec cables for Medium Voltage lines and $4 \times 25 \text{ mm}^2$ Aluminium twisted cables for Low Voltage lines.
 - The poles are implanted according to standard drawings.

Medium Voltage and Mixt lines.

* Simple 11m pole with suspended insulator and anchoring equipment for straight alignments and angles up to 10°;

* Twin 11m poles with suspended insulator and anchoring equipment for angles between 60° and 90°;

Low Voltage lines

* Simple 9m poles with suspension support and suspension clamp for straight alignments and 10° maximum;

* Twin 9m poles with Suspension support and suspension clamp for angles 10° and 45° and for deviations ($\geq 90^\circ$).
