**Project Description**

**Title:** Supply of Medical Equipment to Nfaichang Integrated Health Centre, Mamfe Health District

**Background and Context**

Nfaichang Health Centre, located under **Tinto Council area** and covered by **Mamfe Health District**, is a frontline facility serving a largely rural population. It provides essential healthcare including maternal and child health, emergency care, and routine consultations. However, its service delivery capacity has been severely constrained by the **lack of essential medical equipment** for safe deliveries, diagnostics, and inpatient care.

In a context where access to secondary-level facilities is limited due to distance, road conditions, and ongoing socio-political crisis, the **strengthening of Nfaichang Integrated Health Centre** is a priority for ensuring equitable access to healthcare and reducing avoidable morbidity and mortality.

### **Project Objective**

The objective of this project is to **equip Nfaichang Integrated Health Centre with essential medical equipment** to enhance its capacity in maternal, neonatal, emergency, and routine care.

### **Scope of the Project**

The project covers the supply of:

- **Maternal and Newborn Care Equipment:** Delivery kits, delivery tables, baby cots with mattresses, foetal Doppler machines, and baby weighing scales.
- **Inpatient and Basic Care Equipment:** Hospital beds with mattresses, bedside cupboards, and hemoglobin meters.
- **Diagnostic Equipment:** Microscopes, glucometers, and supporting laboratory tools.

These items are directly aligned with the priority needs for strengthening primary healthcare delivery at the facility.

### **Expected Outcomes and Impact**

- Improved maternal and neonatal care, with safer deliveries and better monitoring of newborns.
- Enhanced diagnostic and monitoring capacity for both communicable and non-communicable diseases.
- Strengthened inpatient care services through provision of adequate beds and equipment.
- Reduced referrals and delays in care, especially for obstetric emergencies and chronic disease management.
- Increased community trust in the health system, leading to improved health-seeking behaviour.

### **Alignment with National and Regional Priorities**

The project aligns with the **National Health Development Plan (PNDS)** and Cameroon's commitment to **Universal Health Coverage (UHC)** by reinforcing the **district health service package**. It directly contributes to strengthening the resilience of primary healthcare in underserved areas.

### **Budgetary Implications**

The total cost of the project is estimated at **10,000,000 FCFA (taxes inclusive)**, as per the official material estimate. This represents a cost-effective investment with direct, measurable benefits for the population of Tinto Council and Mamfe Health District as a whole.

## **Methodology of Execution**

### **1. Procurement of Equipment**

- Equipment will be procured through the **public procurement process** in line with the Public Contracts Code of Cameroon.
- Suppliers must demonstrate compliance with quality standards and provide warranty/after-sales service.

### **2. Quality Assurance**

- Delivered equipment will be verified against the specifications outlined in the material estimate.
- Biomedical engineers/technicians will be engaged to confirm functional status prior to acceptance.

### **3. Distribution and Installation**

- Equipment will be transported directly to **Nfaichang Integrated Health Centre** under district supervision.
- Installation and initial set-up will be carried out with participation of biomedical staff.

### **4. Capacity Building**

- Health staff at Nfaichang will receive orientation on the safe and effective use of new equipment (e.g., Doppler, microscope, glucometer).
- Emphasis will be placed on proper maintenance and record-keeping for sustainability.

### **5. Monitoring and Evaluation**

- District Health Service will track utilization through monthly supervision visits and service delivery reports.
- An evaluation will be conducted to measure improvements in service delivery indicators, particularly maternal and newborn health outcomes.

### **6. Sustainability Measures**

- Maintenance schedules will be established with biomedical support.
- Equipment will be integrated into district asset management systems to ensure accountability and long-term use.
